Respected sir,

I hope this message finds you well. I am Baneen and I am currently pursuing my 3rd year in the Civil Engineering program at SRM. I am writing to express my strong interest in the possibility of undertaking a research internship under your esteemed guidance.

This past summer, I had the opportunity to intern with Raj Paris, a well-known construction company, where I was actively involved in various aspects of industrial scale construction projects such as the study and deterioration of concrete. The experience allowed me to gain practical insights into construction techniques, project management, and site supervision. I had the chance to work closely with the design and execution teams, which greatly enhanced my understanding of real-world applications of civil engineering principles.

In addition to my practical experience, I have completed coursework in Computer Applications in Geotechnical Engineering, Structural Engineering Design, and Fluid Mechanics. These subjects have provided me with a solid theoretical foundation, which I am eager to further explore through hands-on research. I am particularly interested in working on projects that align with your research in steel corrosion and its impact on durability and service life and I believe that under your mentorship, I would be able to enhance my technical skills and contribute meaningfully to ongoing research.

Given the distance of 1.5 hours one way from my college to your campus, I would like to kindly request your assistance in securing hostel accommodation if I am considered for this opportunity. This would enable me to dedicate more time and effort towards the research work.

I would be truly honored to learn from your experience and expertise, and I am confident that this opportunity would greatly benefit my academic and professional growth. Please let me know if you require any further information or documentation from my side.

Thank you very much for considering my application. I look forward to the possibility of contributing to your research team.

Warm regards,

Baneen Rizvi

Respected sir,

I hope this message finds you well. I am Baneen and I am currently pursuing my 3rd year in the Civil Engineering program at SRM. I am writing to express my strong interest in the possibility of undertaking a research internship under your esteemed guidance.

I would like to pursue a winter internship from December 1, 2024, to December 30, 2024. Additionally, I would need to request your assistance in securing hostel accommodation, as the distance of 1.5 hours one way from my college to your campus would make it challenging for me to commute daily.

This past summer, I had the opportunity to intern with Raj Paris, a well-known construction company, where I was actively involved in various aspects of industrial scale construction projects such as the study and deterioration of concrete. The experience allowed me to gain practical insights into construction techniques, project management, and site supervision. I had the chance to work closely with the design and execution teams, which greatly enhanced my understanding of real-world applications of civil engineering principles.

In addition to my practical experience, I have completed coursework in Computer Applications in Geotechnical Engineering, Structural Engineering Design, and Transportation Engineering. These subjects have provided me with a solid theoretical foundation, which I am eager to further explore through hands-on research. I am particularly interested in working on projects that align with your research in steel corrosion and its impact on durability and service life, and I believe that under your mentorship, I would be able to enhance my technical skills and contribute meaningfully to ongoing research.

I have attached my resume and my grade card of all semesters up to this point.

I would be truly honored to learn from your experience and expertise, and I am confident that this opportunity would greatly benefit my academic and professional growth. Please let me know if you require any further information or documentation from my side.

Thank you very much for considering my application. I look forward to the possibility of contributing to your research team.

Warm regards,

Baneen Rizvi
